1. IDENTIFICATION OF THE MATERIAL AND SUPPLIER

Supplier Name Borg Manufacturing, ABN 31 003 246 357

Address 2 Wella Way, Somersby, NSW, Australia, 2250

 Telephone
 1300 500 250 / 02 4340 9800

 Facsimile
 1300 500 255 / 02 4340 5841

Emergency 1300 300 547

Synonyms CUSTOMpine | CUSTOMpine Whiteboard | CUSTOMpine Shelving

Use Building board, cabinets, door facings, furniture

2. HAZARD IDENTIFICATION

Not classified as hazardous according to ASCC Criteria. Not classified as a hazardous substance by the criteria of the ADG Code.

UN Number None Allocated
Hazchem Code None Allocated
Packing Group None Allocated
Poisons Schedulde Number None Allocated

3. COMPOSITION/INFORMATION OF INGREDIENTS

Ingredient	Formula	CAS No.	Content
Paraffin Wax	Not Available	8002-74-2	<1%
Softwood(s)	Not Available	None	>80%
Urea formaldehyde (UF) resin or	Not Available	9011-05-6	<20%
Melamine urea formaldehyde (MUF) resin	Not Available	25036-13-9	<20%
Decorative Paper	Not Available	None	<2%

Notes: Melamine urea formaldehyde resin is used in MR boards and urea formaldehyde resin is also used in STD board. The above ingredients are bound together under heat and pressure. The process cures the resin, but small amount of formaldehyde from the resin may be released from the finished product. Formaldehyde content in the finished product complies with the Australian Standard (AS/NZS 1859) E1 requirement when tested to AS/NZS 4266.16 (Desiccator test).

4. FIRST AID MEASURES

Ingestion Give water to drink. If abdominal discomfort continues, contact a Poisons Information Centre on 13 11 26

(Australia wide) or a doctor (at once). Due to product form and application, ingestion is considered unlikely.

Eye If in eyes, hold eyelids apart and flush the eye continuously with running water. Continue flushing until advised

to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes.

Skin Wash with mild soap and running water. Remove clothing contaminated with wood dust.

Inhalation If inhaled, remove from the contaminated area.

Advice to Doctor Treat symptomatically.

5. FIRE FIGHTING MEASURES

Fire and Explosion Burning or smouldering boards or dust can generate carbon dioxide and other pyrolysis products typical of

burning organic material which are irritating to the respiratory tract. Dry dusts in high concentrations can be explosive. Use water, CO2, foam or dry chemical fire extinguishers and avoid breathing smoke from burning or

smouldering material.

6. ACCIDENTAL RELEASE MEASURES

Spillage and Disposal

Off-cuts, general waste material and protective plastic film should be placed in containers and disposed of at approved landfill sites, or burnt in an approved furnace or incinerator, in accordance with disposal authority guidelines.

DO NOT BURN in barbeques, combustion stoves or any open fires in home as irritating gases are emitted.

Dust from the boards should be cleaned up by vacuuming or wet sweeping.

7. STORAGE AND HANDLING

Storage The panels should be stored in well-ventilated areas away from sources of heat, flame or sparks.

No special transport requirements are considered necessary.

Handling Before use carefully read the product label. Use of safe work practices are recommended to avoid eye

or skin contact and inhalation. Observe good personal hygiene, including washing hands before eating.

Prohibit eating, drinking or smoking in contaminated areas.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Exposure Standard The Worksafe Australia Exposure Standards, published in May 1995 are:

Wood dust (softwood)

5mg/cubic metre time-weighted average (TWA) measured as inspirable particulates.

10mg/cubic metre short term exposure limit (STEL).

It is also listed as a sensitiser.

Formaldehyde

1.0ppm (1.2mg/cubic metre) time-weighted average (TWA) 8 hours. 2.0ppm (2.5mg/cubic metre) short term exposure limit 15 minutes (STEL).

It is also listed as a sensitiser. Category 2 carcinogen (probable human carcinogen).

Paraffin wax (fume)

2mg/cubic metre time-weighted average (TWA) 8 hours.

Keep exposures as low as practicable with the aim of maintaining inspirable wood dust levels below

1.0mg/cubic metre (TWA).

Engineering Controls All work with these boards should be carried out in such a way as to minimise the generation of, and

exposure to dust. Under factory conditions, sawing, drilling, sanding etc. should be done with equipment fitted with exhaust devices capable of removing wood dust, at source. Hand power tools should be fitted with dust bags and used in well-ventilated areas. Work areas should be well-ventilated. They should be cleaned at least daily, and dust removed by vacuum cleaning or wet sweeping method. It is recommended that all work and storage areas are smoke free and other airborne contaminants be kept to

a minimum.

Skin Protection Wear loose, comfortable clothing. Long-sleeved shirts and trousers are recommended to prevent

skin irritation. After handling boards, wash with mild soap and water. Do not scratch or rub the skin if it becomes irritated. Wash work clothes regularly and separately from other clothes. Comfortable

lightweight leather or equivalent work gloves (AS 2161) should be worn.

Eye Protection Dust resistant safety glasses or non-fogging goggles (AS/NZS 1336/1337) should be worn when machining.

Resipiratory Protection A class P1 or P2 replaceable filter or disposable half face-piece particulates respirator should be worn

when machining. Respirators should comply with AS/NZS 1716 and be selected, used and maintained in

accordance with AS/NZS 1715.

Flammability These boards are flammable but difficult to ignite. Fine airborne dust can ignite so avoid a build-up of

dust and keep all storage and work areas well ventilated. Avoid sources of radiant heat and flame; and avoid sparks and sources of ignition in all electrical equipment, including dust extraction equipment.

People must not smoke in storage or work areas.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance The boards are manufactured as pressed boards ranging in thickness from 9mm to 33mm. They are

made from plantation wood fibres or flakes, which are bonded together with resin (glue). The product is surfaced with a decorative paper impregnated with resin. Only Moisture Resistance (MR) particle-

boards have a blue-green core.

Odour Newly manufactured and freshly cut surfaces may have a paint pine and resin odour.

Boiling Point (°C) Not Applicable Flammability Limits Not Applicable Vapour Pressure Not Applicable Early Fire Hazard Indices to AS 1530.3 **Flashpoint** Not Applicable Ignitability Index 12 - 14 5 - 7 Solubility in Water Negligible Spread of flame index Melting Point (°C) Not Applicable Heat Evolved Index 4 - 6 0.6 - 0.8 Specific Gravity (water=1) Smoke Developed Index 3 - 5

Autoignition Temperature Does not auto ignite in its intact state

10. TOXICOLOGICAL INFORMATION

Health Hazard Information

Formaldehyde gas may be released under some conditions. However, in well-ventilated storage areas and workplaces, the concentration of formaldehyde is unlikely to exceed the World Health Organisation standard of 0.1ppm for the general environment and it will be well below the Worksafe Australia occupational Exposure Standard of 1.0 ppm. Wood dust will be given off from machining the product, and gas and vapour may be produced from heat processing. The known health effects from wood dust and formaldehyde are as follows:

Wood Dust

Dust and splinters may cause irritation of the nose and throat, eyes and skin. Some woods may also be sensitisers, and some people may develop allergic dermatitis or asthma. Inhalation of wood dust may increase the risk of nasal and paranasal sinus cancer. Wood dust has been evaluated by the International Agency for Research on Cancer (IARC) as Group 1, carcinogenic to humans.

Formaldehyde

Formaldehyde gas and dilute solution of formaldehyde in water are irritating to the nose and throat, eyes and skin. The solutions are also sensitisers and contact dermatitis has been reported.

Formaldehyde has been evaluated by the International Agency for Research on Cancer (IARC) as group 2A, probably carcinogenic to humans. The IARC again evaluated formaldehyde in June 2004 and concluded that: "There are adequate data available from humans for an increased risk of nasopharyngeal cancer" and that formaldehyde should now be classified as Group 1, carcinogenic to humans.

Worksafe Australia has listed Formaldehyde as Sensitiser and Category 2 carcinogen (probable human carcinogen) as "those substances for which there is sufficient evidence to provide a strong presumption that human exposure may result in the development of cancer. This evidence is generally based on appropriate long term animal studies, limited epidemiological evidence or other relevant information".

Exposures to wood dust produced from machining the products, and gas and vapour from heat processing with inadequate ventilation may result in the following health effects:

Ingestion Unlikely to occur but swallowing the dust may result in abdominal discomfort.

Eye The dust, gas and vapour may be irritating to the eyes causing discomfort and redness.

Skin The dust, gas and vapour may irritate the skin, resulting in itching and occasionally a red rash.

Inhalation The dust, gas and vapour may irritate the nose, throat and lungs, especially in people with upper respiratory tract or

chest complaints such as asthma.

Chronic Repeated exposure over many years to uncontrolled wood dust may increase the risk of naval cavity cancer.

Inhalation of wood dust may also increase the risk of lung fibrosis (scarring). There are also increased risks of respiratory and skin sensitisation from wood dust and formaldehyde, resulting in asthma and dermatitis respectively. But if the work practices noted in this SDS are followed and exposure to airborne dust are kept to a

minimum, no chronic health effects are anticipated.

11. ECOLOGICAL INFORMATION

Environment Limited ecotoxicity data was available for this product at the time this report was prepared. Ensure appropriate

measures are taken to prevent this product from entering the environment.

12. DISPOSAL CONSIDERATIONS

Waste Disposal Reuse where possible. Not regulated as a hazardous waste by Australian environmental authorities. Off-cuts

and general waste material should be placed in containers and disposed of at approved landfill sites or burnt in an approved furnace or incinerator in accordance with disposal authority guidelines. Do not burn in barbeques,

combustion stoves or open fires in the home as irritating gases may be evolved.

Legislation Dispose of in accordance with relevant local legislation.

13. TRANSPORT INFORMATION

NOT CLASSIFIED AS A DANGEROUS GOOD BY THE CRITERIA OF THE ADG CODE

Shipping Name None Allocated DG Class None Allocated Subsidiary Risk(s) None Allocated

UN No. None Allocated Hazchem Code None Allocated EPG None Allocated

Packing Group None Allocated

14. REGULATORY INFORMATION

Poison Schedule A poison schedule number has not been allocated to this product using the criteria in the Standard for

the Uniform Scheduling of Drugs and Poisons (SUSDP).

AICS All chemicals listed on the Australian Inventory of Chemical Substances (AICS).

15. OTHER INFORMATION

Respirators In general, the use of respirators should be limited and engineering controls employed to avoid exposure.

If respiratory equipment must be worn, ensure correct respirator selection and training is undertaken. Remember that some respirators may be extremely uncomfortable when used for long periods. The use of air powered or air supplied respirators should be considered where prolonged or repeated use is

necessary.

Combustible - Explosive Carbonaceous Dust

Carbonaceous/organic dusts have the potential, with dispersion, to present an explosion hazard if an ignition source exists. All equipment used to handle, transfer or store this product MUST BE cleaned thoroughly prior to cutting, welding, drilling or exposure to any other form of heat or ignition sources. If bulk stored, containers should be ventilated on a routine basis to avoid vapour accumulation (where

applicable, eg. for flocculants).

Health Effects from Exposure

It should be noted that the effects from exposure to this product would depend on several factors including: frequency and duration of use; quantity used; effectiveness of control measures; protective equipment used and method of application. Given that, it is impractical to prepare a Chem Alert report, which would encompass all possible scenarios, it is anticipated that users will assess the risks and apply

control methods where appropriate.

Personal Protective Equipment Guidelines The recommendation for protective equipment contained within this Chem Alert report is provided as a guide only. Factors such as method of application, working environment, quantity used, product concentration and the availability of engineering controls should be considered before final selection of personal protective equipment is made.
