

e-maximus is Wesbeam's high strength steel replacing LVL made from sustainably sourced trees grown close to the only LVL factory in Australia.

e-maximus has the strength of steel, the flexibility of LVL and does away with costly connection brackets and welding.

e-maximus®

Features	 Engineered for straightness, consistence Available in lengths of 5.4m, 6.0m and 6 Can be easily treated to e2S, H2 and H LVL is treated to a e2S Hazard Level in 25 years against termite attack when u Available ex-stock Competitively priced High load bearing capacity High strength yet lighter and safer to ha Chamfered edges for safer and more of Made from sustainably sourced timber Fully supported by Wesbeam e-house manufacturers' software Manufactured in Australia by a wholly of Wesbeam has full Chain of Custody aligned 	y and guaranteed performance 5.6m 13 Hazard Levels. When the e-maximus the Wesbeam mill it is guaranteed for ised South of the Tropic of Capricorn andle comfortable handling veneers and nail plate owned Australian company gned with the Responsible Wood (RW) e Endorsement of Forest Certification (PEFC)
e-maximus LVL Beam Sizes	Beam Depth 'D' (mm)	Beam Width 'B' (mm)
	300	82
	400	82
	450	82
e-maximus LVL Beam Spans	The design span of an e-maximus LVL be between the faces of the beam supports. measurement or the length of the e-maxir	am is measured as the distance DO NOT use the centreline to centreline nus beam as the design span.
Single Span	The span of a member supported at or ne supports. This also applies where member intermediate supports to remove spring.	ear both ends with no immediate ers are partially cut through over
Design Loads	Roof design loads are determined in acco timber-framed construction, Part 2: Non-c	rdance with AS1684.2:2010 - Residential cyclonic areas, where:
	Roof Type	Design Roof Mass (kg/m ²)
	Sheet Roof only	20
	Sheet Roof + Ceiling	40
	Tile Roof only	60
	Tile Roof + Ceiling	90
Wesbeam Solid LVL Splay Detail	rafter Chamfer cut should not be less than 1:3

450 x 82	11.2	10.7	10.0	9.6	9.1	8.7	8.5	7.9	7.5

1 All sections with depth to breadth ratio greater than three must be laterally restrained against rollover at mid-span, strutting points and at supports as per AS 1684.

2 A minimum initial clearance of 25mm to ceiling framing member shall be provided at mid-span.

3 Bearing lengths at end supports shall not be less than 65mm.

4 Beam ends may be chamfer cut to a minimum depth of 90mm.

450 x 82	7.3	6.9	6.6	6.4	7.1	6.7	6.5	6.3	7.0	6.6	6.4	6.2	

1 All sections with a depth to breadth ratio exceeding three must be laterally restrained in accordance with AS1684.2:2010.

2 Roof Load Width 'RLW' for the underpurlin is the average of the rafter spans either side of the underpurlin supported by the Strutting-Hanging Beam.

3 Underpurlin span assumed to be one-half of the Strutting-Hanging Beam span.

4 Ceiling Load Width 'CLW' is the average of the ceiling joist spans either side of the Strutting-Hanging Beam.

5 Bearing lengths at end supports to be not less than 65mm.

```
6 Beam ends may be chamfer cut to a minimum depth of 90mm.
```

* Check the clearance between the garage floor to the underside of garage pitching beam to ensure compliance with relevant Building Regulations and Australian Standards.

1 The above Span Tables for Roof Beams assume no lateral restraint to the bottom edge under wind uplift conditions.

2 Bearing lengths at end supports to be not less than 65mm.

3 Beam ends may be chamfer cut to a minimum depth of 90mm.

SPECIFICATIONS

Veneer

Thickness	Constant through the product thickness
Species	Sustainably sourced timber
Joints	Outer 2 plies are scarf jointed
	Inner plies – scarf and/or butt iointed

Moisture Content

8% - 15% (at time of dispatch)

Dimensional Tolerances

Available on request

Straightness

Available on request

Density

650 kg/m³ (approximately)

Adhesive

Phenolic – AS2754.1:2016 - Adhesives for timber and timber products; Adhesives for manufacture of plywood and laminated veneer lumber (LVL)

Bond

Type A – AS/NZS2098.2:2012 - Methods of tests for veneer and plywood; Bond quality of plywood (chisel test)

Joint Group

JD3 - for nails, bolts and screws

Finish

Unsanded faces, sawn edges and arrised edges

Branding

Each piece of Wesbeam LVL is branded at least once with the product name for identification and evidence of compliance with manufacturing control standards

Storage

Store on level bearers at maximum 1800mm centres well clear of the ground, and cover to keep dry but allow ventilation

Source

Sustainably sourced timber certified to AS4707:2014 - Chain of custody for forest products / PEFC

Condition

Untreated, but can be specified to e2S (CodeMark Certified for Termite & Borers resistance for use in the geographical locations in the South of the Tropic of Capricorn), H2 & H3 as per AS/NZS1604.4:2012 -Specifications for preservative treatment; Laminated veneer lumber (LVL) to be used in any geographical location in Australia.
